

Compare Sources & Arguments

Workbook 1 - Learn - Focused practice

Directions

Work slowly. Identify exactly what the source says before you decide what the evidence can support.

Exercise 1

Source A says the park needs more lighting because evening use has increased. Source B agrees evening use has increased but recommends testing temporary lights before permanent installation.

Task: What do both sources agree on?

- A. Evening park use has increased.
- B. Permanent lights should be installed immediately.
- C. Temporary lights are useless.
- D. The park should close earlier.

Exercise 2

Source A supports a permanent café extension. Source B supports a four-week trial first.

Task: What is the main difference?

- A. Whether the café exists.
- B. How quickly the schedule should become permanent.
- C. Whether customers buy food.
- D. Whether four weeks contains weekends.

Exercise 3

Source A cites a preference survey. Source B says preference does not show whether the program is affordable.

Task: How does Source B challenge Source A?

- A. By arguing that the evidence does not address cost.
- B. By denying that surveys exist.
- C. By changing the subject to weather.
- D. By proving the program is unaffordable.

Exercise 4

Source A predicts remote work will reduce teamwork. Source B cites a six-month trial in which project completion and response times remained stable.

Task: Which source is better supported on performance?

- A. Source A, because predictions are stronger than trials.
- B. Source B, because it provides measured results from an actual trial.
- C. Both are equally supported because both mention work.
- D. Neither can make any statement about performance.

Answer reasoning

Check your reasoning, not only your answer.

For every question, compare your reasoning with the explanation. If you missed the item, identify the exact step where your reasoning changed the source or used evidence for the wrong job.

Exercise 1

Best answer: A. Evening park use has increased.

Why: Both sources accept the same underlying condition even though their recommendations differ.

Exercise 2

Best answer: B. How quickly the schedule should become permanent.

Why: The disagreement is about the decision strength and timing, not the general topic.

Exercise 3

Best answer: A. By arguing that the evidence does not address cost.

Why: Source B identifies a mismatch between the evidence and a separate decision criterion.

Exercise 4

Best answer: B. Source B, because it provides measured results from an actual trial.

Why: The trial directly measures performance; the prediction is unsupported.

Mistake check

For every miss, label the reason: wrong claim, evidence mismatch, too broad or too certain, reasoning gap, source or format confusion, or rushed reading.

Then write one sentence explaining what you will check next time.
