Workbook 2 - Apply - Focused practice

Directions

Treat each item as close-choice practice. Preserve scope, certainty, and the exact job of each piece of evidence.

Exercise 1

Article: "Crowding is mainly an 8 a.m. problem." Table: 7:30 - 48/55 seats; 8:00 - 68/55; 8:20 - 64/55; 9:00 - 50/55. Passenger note: "I was left behind twice last month around 8:15."

Task: Which statement best integrates all three sources?

- A. Crowding appears concentrated near 8:00-8:20, and the passenger note gives an example consistent with the capacity data.
- B. The passenger note proves every rider is left behind daily.
- C. Crowding is identical at every time.
- D. The table contradicts the article because 7:30 also has riders.

Exercise 2

Proposal: "The new printer reduces cost." Cost table: Old printer \$0.041/page; new printer \$0.029/page; new maintenance contract adds \$180/month.

Task: What must be known before the overall cost claim is supported?

- A. Monthly print volume, so per-page savings can be compared with the added maintenance cost.
- B. The printer color.
- C. The office wall size.
- D. Whether employees like new equipment.

Exercise 3

Article: "Weekend use increased after the schedule change." Table: Saturday visits rose 22%; Sunday visits fell 4%; total weekend visits rose 9%.

Task: Which statement accurately combines the article and table?

- A. Overall weekend use increased, but the change was driven by Saturday rather than both days.
- B. Both Saturday and Sunday use increased equally.
- C. Sunday visits caused the entire increase.
- D. The article is false because one day declined.

Exercise 4

Fact sheet: 74% of survey respondents support a program; response rate 31%. Article: "Residents strongly support the program."

Task: What is the best evaluation?

- A. The fact sheet supports strong support among respondents but does not establish the same level of support among all residents.
- B. The article is fully proven for all residents.
- C. The survey contains no useful information.
- D. A response rate cannot affect interpretation.

Answer reasoning

Check your reasoning, not only your answer.

For every question, compare your reasoning with the explanation. If you missed the item, identify the exact step where your reasoning changed the source or used evidence for the wrong job.

Exercise 1

Best answer: A. Crowding appears concentrated near 8:00-8:20, and the passenger note gives an example consistent with the capacity data.

Why: It combines the pattern with the anecdote while keeping the anecdote in proper scope.

Exercise 2

Best answer: A. Monthly print volume, so per-page savings can be compared with the added maintenance cost.

Why: The formats provide both a saving and a new expense; volume is needed to combine them.

Exercise 3

Best answer: A. Overall weekend use increased, but the change was driven by Saturday rather than both days.

Why: It respects both the total and the different day-level patterns.

Exercise 4

Best answer: A. The fact sheet supports strong support among respondents but does not establish the same level of support among all residents.

Why: The combined reading must preserve the difference between respondents and the full population.

Mistake check

For every miss, label the reason: wrong claim, evidence mismatch, too broad or too certain, reasoning gap, source or format confusion, or rushed reading. Then write one sentence explaining what you will check next time.
