

Relationships & Inference - Practice Workbook

Mixed file-based practice across the six skills in this topic.

How to use this workbook

Try each question without looking at the skill label in the answer key. After checking, name the relationship you used: order, cause, comparison, inference, conclusion, or effect between ideas.

Solar Cart Trial

Text 1

A campus tested two small electric carts for moving supplies. Cart A followed a fixed route every hour. Cart B could be requested by staff through an app. During the first week, Cart A completed more total trips, but Cart B reduced waiting time for urgent requests. In the second week, staff moved frequently requested supplies closer to the fixed route, and Cart A carried more of those items.

1. Which event occurs before Cart A carries more frequently requested supplies?

- A. Staff move those supplies closer to the fixed route
- B. The campus removes both carts
- C. Cart B stops receiving requests
- D. The app is deleted

2. How are the carts different?

- A. Cart A follows a schedule, while Cart B responds to requests
- B. Only Cart A moves supplies
- C. Both use the same scheduling method
- D. Only Cart B is electric

3. Which conclusion is best supported?

- A. Each system offers a different advantage, and changes in supply placement can affect how useful the fixed route is
- B. On-demand service is always better
- C. Fixed routes never help urgent requests
- D. Supply location has no effect

The Missing Labels

Text 2

A science club stored four clear liquids in identical bottles. One morning, two labels had fallen off. Rather than guess, the club adviser placed the unlabeled bottles aside and asked students to review the preparation log. The log showed that only salt water and sugar water had been prepared in those bottle sizes that day. Students then used simple tests to determine which unlabeled bottle was which.

4. What can be inferred about the adviser?

- A. The adviser prefers evidence to guessing when identification is uncertain
- B. The adviser knows the labels can never fall off
- C. The adviser wants students to discard all liquids
- D. The adviser already memorized every bottle

5. How does the preparation log affect the students' testing?

- A. It narrows the possible identities before they test the bottles
- B. It causes the labels to fall off
- C. It makes testing unnecessary because it identifies each exact bottle
- D. It adds more possible liquids

6. Which detail best explains why the students still need tests after reading the log?

- A. The log identifies two possible liquids but does not say which bottle contains which one
- B. The bottles are clear
- C. The club meets in the morning
- D. The adviser asks students to read

Two Park Entrances

Text 3

A park has two entrances. The north entrance is next to a bus stop and has a wide paved path. The south entrance is closer to a residential street but begins with a steep gravel slope. Visitor counters show more weekday use at the north entrance. On weekends, when nearby residents visit more often, the difference between the two entrances becomes smaller.

7. How are the entrances different?

- A. North is near transit and paved; south is closer to homes and begins with a steep gravel slope
- B. Only the south entrance is part of the park
- C. Both have identical paths and locations
- D. Only the north entrance has visitors

8. What can be inferred about visitor patterns?

- A. Access from transit likely matters more on weekdays, while nearby residents contribute more weekend use at the south entrance
- B. No residents use the park on weekdays
- C. The north entrance is always empty on weekends
- D. The gravel slope has been removed

9. Which conclusion is best supported?

- A. Entrance use appears to depend on both physical access and who is likely to visit at different times
- B. Every park should close steep entrances
- C. Bus stops always determine park use
- D. Weekend use is identical at both entrances

The Rehearsal List

Text 4

For three rehearsals, the student stage crew forgot at least one small item: tape, spare batteries, or marker pens. After the third rehearsal, Nina created a one-page checklist and taped it inside the supply cabinet. At the next two rehearsals, crew members checked the list before leaving the storage room, and none of the listed items were forgotten.

10. What causes Nina to create the checklist?

- A. Repeated forgotten supplies
- B. A new auditorium
- C. The checklist itself
- D. A canceled rehearsal

11. How does the checklist affect the crew?

- A. It gives them a shared reminder before leaving storage, and the listed items are no longer forgotten in the next two rehearsals
- B. It makes them forget more supplies
- C. It changes the rehearsal music
- D. It removes the supply cabinet

12. Which event happens immediately before the crew leaves the storage room at the later rehearsals?

- A. They check the list
- B. Nina creates the list after they leave
- C. They forget all supplies
- D. They cancel rehearsal

Review your reasoning

Before checking the key, mark the question that felt hardest. Write one clue that changed your mind and name the distractor that was most tempting.

Answer key and reasoning

1. A - The supply-location change precedes the later result. Skill: Sequence.
Watch for: Identify the relationship the question is asking for before solving.
2. A - The passage directly contrasts fixed route versus on-demand operation. Skill: Compare and contrast.
Watch for: Identify the relationship the question is asking for before solving.
3. A - The passage shows different strengths and a later adjustment that improves Cart A's usefulness. Skill: Conclusions.
Watch for: Identify the relationship the question is asking for before solving.
4. A - Setting the bottles aside and checking the log show an evidence-first approach. Skill: Inference.
Watch for: Identify the relationship the question is asking for before solving.
5. A - The log reduces the possible liquids from many to two but does not fully identify them. Skill: Relationships.
Watch for: Identify the relationship the question is asking for before solving.
6. A - The log narrows possibilities but leaves the bottle-to-liquid match unresolved. Skill: Cause and effect.
Watch for: Identify the relationship the question is asking for before solving.
7. A - The answer compares access/location and path conditions on the same basis. Skill: Compare and contrast.
Watch for: Identify the relationship the question is asking for before solving.
8. A - The timing and location patterns support a cautious inference about different visitor sources. Skill: Inference.
Watch for: Identify the relationship the question is asking for before solving.
9. A - The passage links location/path differences with different weekday/weekend patterns. Skill: Conclusions.
Watch for: Identify the relationship the question is asking for before solving.
10. A - The repeated problem motivates the new procedure. Skill: Cause and effect.
Watch for: Identify the relationship the question is asking for before solving.
11. A - The checklist changes the preparation routine and is followed by fewer omissions. Skill: Relationships.
Watch for: Identify the relationship the question is asking for before solving.
12. A - The passage says crew members check the list before leaving. Skill: Sequence.
Watch for: Identify the relationship the question is asking for before solving.
