

Sequence - Workbook 1

Build the order from explicit time and condition words.

Strategy reminder

Find the target step, then build a small BEFORE -> TARGET -> AFTER chain. A true detail is not enough; it must be in the position the question asks for.

Community Room Reservation

Text 1

Residents submit an online request for a community room. Staff first check whether the requested time is available. If it is, the resident receives an approval message. The message includes a payment link, but the link remains inactive until the approval is recorded in the system. After payment, staff send the door instructions on the morning of the reservation.

1. Which step occurs immediately after staff confirm that the requested time is available?

- A. The resident receives an approval message
- B. Staff send door instructions
- C. The resident enters the room
- D. The resident pays before receiving approval

2. Which step must happen before the payment link becomes active?

- A. Door instructions are sent
- B. Approval is recorded in the system
- C. The reservation date arrives
- D. The resident enters the room

Testing Water Samples

Text 2

At the river, students fill sterile bottles and cap them immediately. They write the location and time on each label before placing the bottles in a cooler. At school, the samples are allowed to reach room temperature. Only then do students insert the testing strips. They photograph the strips before comparing the colors with the reference chart.

3. What happens immediately before the samples are placed in the cooler?

- A. The bottles are capped
- B. The labels are written
- C. The strips are photographed
- D. The samples reach room temperature

4. What must occur before students insert the testing strips?

- A. The samples reach room temperature
- B. The colors are compared with a chart
- C. The strips are photographed
- D. The bottles are returned to the river

Museum Audio Tour

Text 3

Visitors select a language at the kiosk and scan their admission ticket. The kiosk then displays a four-digit tour code. Visitors enter the code into the audio app before choosing a gallery route. When they reach a numbered stop, they tap that number to hear the recording.

5. What happens after the admission ticket is scanned but before a gallery route is chosen?

- A. A four-digit tour code is displayed and entered
- B. The recording for a numbered stop plays
- C. The visitor selects a language after choosing a route
- D. The visitor leaves the gallery

6. Which action occurs last?

- A. Selecting a language
- B. Scanning the ticket
- C. Choosing a gallery route
- D. Tapping a numbered stop in the gallery

Review your reasoning

Before checking the key, mark the question that felt hardest. Write one clue that changed your mind and name the distractor that was most tempting.

Answer key and reasoning

1. A - The approval message follows the availability check.

Watch for: Do not jump to payment just because it is a later required step.

2. B - The passage states that the link remains inactive until approval is recorded.

Watch for: "Until" signals a required earlier condition.

3. B - The students label the bottles before placing them in the cooler.

Watch for: Capping happens earlier, but the question asks for the immediate prior step.

4. A - "Only then" means the samples must first reach room temperature.

Watch for: A real later step is not a prerequisite.

5. A - The code is displayed and entered between the scan and route choice.

Watch for: Track the interval named in the question.

6. D - Tapping a numbered stop happens after the kiosk setup and route selection.

Watch for: Last means latest in the described sequence, not last option listed.
