Workbook 1 - Learn - Focused practice

Directions

Work slowly. Identify exactly what the source says before you decide what the evidence can support.

Exercise 1

Article: "The noon shuttle is the busiest." Table: 10 a.m. 28 riders; 11 a.m. 35; noon 52; 1 p.m. 39.

Task: How does the table relate to the article?

- A. It supports the claim.
- B. It contradicts the claim.
- C. It provides no relevant information.
- D. It proves every noon shuttle is full.

Exercise 2

Memo: "Most errors occur during the final packing step." Table: Receiving 8; Assembly 11; Packing 27; Shipping 9.

Task: Which claim is supported by the table?

- A. Packing has the highest recorded error count.
- B. All packing work is incorrect.
- C. Shipping has no errors.
- D. Receiving causes packing errors.

Exercise 3

Article: "The pilot lowered waiting time." Fact sheet: Average wait before pilot 18 min; during pilot 13 min; sample: four weekdays.

Task: What limitation does the fact sheet add?

- A. The result covers only four weekdays.
- B. Waiting time cannot be measured.
- C. The pilot increased waiting.
- D. The article contains no claim.

Exercise 4

Timeline: May - staff training; June - new form launched; July - errors decline. Memo: "The new form alone caused the decline."

Task: What does the timeline show?

- A. Another change occurred before the decline, so the form cannot be isolated as the only cause.
- B. The memo is automatically correct.
- C. Training occurred after the decline.
- D. Errors did not decline.

Answer reasoning

Check your reasoning, not only your answer.

For every question, compare your reasoning with the explanation. If you missed the item, identify the exact step where your reasoning changed the source or used evidence for the wrong job.

Exercise 1

Best answer: A. It supports the claim.

Why: Noon has the highest rider count in the displayed data.

Exercise 2

Best answer: A. Packing has the highest recorded error count.

Why: The table supports a comparative count, not a universal or causal claim.

Exercise 3

Best answer: A. The result covers only four weekdays.

Why: The fact sheet supports the decline but shows the evidence comes from a limited period.

Exercise 4

Best answer: A. Another change occurred before the decline, so the form cannot be isolated as the only cause.

Why: The timeline introduces another plausible contributing factor.

Mistake check

For every miss, label the reason: wrong claim, evidence mismatch, too broad or too certain, reasoning gap, source or format confusion, or rushed reading. Then write one sentence explaining what you will check next time.
