

Analyze, Don't Just Summarize

Workbook 2 - Apply

Directions

Apply the skill with less support. Explain the reasoning, not only the final answer.

Exercise 1

Evidence sentence: "The pilot reduced defects from 31 to 19 per 10,000 units."

Task: Add analysis and comparison.

Exercise 2

A source uses an expert quote from an unrelated field.

Task: What should you analyze?

Exercise 3

A source recommends a full rollout after a short pilot.

Task: What reasoning question should you ask?

Exercise 4

A source has fewer statistics but better cause-and-effect reasoning.

Task: What matters?

Answer reasoning

Compare your reasoning, not just your wording.

Exercise 1

Reasoning target: Explain that it measures the exact defect category, then contrast it with an unsupported prediction from the other source.

Exercise 2

Reasoning target: Credibility fit: expertise matters only when it is relevant to the claim.

Exercise 3

Reasoning target: Does the size of the conclusion exceed what the pilot can support?

Exercise 4

Reasoning target: Quality and relevance of support, not quantity of numbers.

Mistake check

If you missed an item, label the cause: task misunderstanding, source drift, weak evidence match, summary without analysis, organization, or sentence clarity. Then redo the item in one precise sentence.
