

Full Extended Response

Study Guide - Extended Response

1. Learning goal

Complete a full paired-source response in a realistic workflow, then use the three-trait rubric to review what to improve.

2. What this skill means

Full ER practice combines everything: read, map, judge, plan, draft, revise, and self-review. Timed simulation gives you 45 minutes. Untimed mode removes the countdown but keeps the same source-based task and review standard.

3. Do not confuse it with

The self-review is not an official score. Chee Skool does not know a machine-verified essay score in V1. Your provisional 0/1/2 trait choices are reflection data and stay separate from objective quiz accuracy.

4. How GED-style questions may ask it

The full prompt asks you to analyze both sources and determine which position is better supported by evidence and reasoning.

5. Repeatable method

- 0-8 min: read and map both sources.
- 8-12 min: choose the stronger source and outline two reasons.
- 12-37 min: draft with evidence and analysis.
- 37-45 min: revise source accuracy, organization, and sentence clarity.
- After submission: self-review all three traits and compare with the model only after your own attempt.

6. Worked example

Planner: Winner A | Reason 1 measured outcome | Evidence 19% less waste
| Reason 2 limitation handled | B weakness unsupported odor prediction.

Question: Why is this planner useful?

Reasoning: It stores the reasoning chain in shorthand so drafting can focus on sentences rather than re-deciding the argument.

Best answer: A compact planner protects both time and source accuracy.

7. Common traps

- Starting to draft before choosing the stronger source.
- Spending too long on the introduction.
- Quoting evidence without analysis.
- Treating the model response as something to copy before attempting the prompt.
- Treating self-score as an official GED score.

8. Diagnostic help

- If you run out of time, shorten planning notes and introduction before cutting analysis.
- If your draft is mostly source summary, add why-this-matters sentences after evidence.
- If your self-score feels uncertain, use the observable checklist rather than judging whether the essay "sounds smart."

9. Quick check

You have 45 minutes and two sources. Your first impulse is to write the introduction immediately.

What should you do instead?

Check yourself: Map both sources and decide the better-supported argument before drafting.
