

Relationships - Workbook 1

Analyze how events and decisions change what happens next.

Strategy reminder

Write A → B using a precise verb: causes, changes, motivates, limits, reveals, contrasts, or strengthens. Then find the evidence showing the effect.

Closing the Side Entrance

Text 1

A school temporarily closed a side entrance after rain damaged the walkway. Students who normally entered there began using the main entrance, creating a long line just before classes. In response, staff opened a second check-in table at the main entrance and adjusted morning duty schedules. The line became shorter even though the side entrance remained closed.

1. How does the walkway damage affect morning arrival procedures?

- A. It leads to a side-entrance closure, which increases traffic at the main entrance and prompts a second check-in table
- B. It makes all students arrive later permanently
- C. It directly repairs the main entrance
- D. It has no effect on staffing

2. What role does the second check-in table play?

- A. It creates the original walkway damage
- B. It responds to congestion caused by the entrance closure
- C. It closes the side entrance
- D. It removes the need for any entrance

Shared Presentation

Text 2

Amina prefers to speak from brief notes, while Theo writes full sentences for every slide. During rehearsal, Theo repeatedly loses his place when the slides advance early. Amina suggests placing only keywords on shared cue cards. Theo agrees to try them and, during the next rehearsal, recovers quickly after a slide changes unexpectedly.

3. How does Amina affect Theo's preparation?

- A. She persuades him to try a cue-card method that helps him recover during rehearsal
- B. She prevents him from practicing
- C. She writes a full speech for him
- D. She changes the topic of the presentation

4. How does the second rehearsal develop the relationship between Amina's suggestion and Theo's problem?

- A. It shows that the suggested method helps with the exact problem seen earlier
- B. It proves slides never change
- C. It creates a new unrelated problem
- D. It shows Theo refused the suggestion

A Narrow Trail

Text 3

The original trail to the lookout crossed a steep, narrow slope. During busy weekends, hikers frequently stopped to let others pass, and plants beside the trail were trampled. The park built a short one-way loop around the narrowest section. Hikers no longer had to pass each other there, and the damaged plants began recovering behind a small barrier.

5. How does the narrow slope contribute to the park's decision?

- A. It creates congestion and plant damage that motivate the one-way loop
- B. It provides more space for hikers
- C. It causes the park to close permanently

D. It is unrelated to the loop

6. What relationship does the passage show between the one-way loop and plant recovery?

- A. The loop reduces passing pressure near the damaged area, helping the plants recover
- B. The plants cause the loop to become narrower
- C. The loop increases trampling
- D. The two are mentioned but unrelated

Review your reasoning

Before checking the key, mark the question that felt hardest. Write one clue that changed your mind and name the distractor that was most tempting.

Answer key and reasoning

1. A - The answer follows the causal/functional chain from damage to closure to congestion to procedure changes.

Watch for: Describe how one event changes another, not just that both happened.

2. B - The table is a response designed to reduce the congestion that followed the closure.

Watch for: Role questions ask what a detail does in the larger situation.

3. A - Her suggestion changes his method and improves his ability to recover.

Watch for: Use a relationship verb such as motivates or changes.

4. A - The later rehearsal demonstrates the effect of the new method on the earlier difficulty.

Watch for: Later evidence can reveal whether an earlier action mattered.

5. A - The setting creates the problem the redesign is intended to solve.

Watch for: Setting matters when it shapes actions or outcomes.

6. A - The route change reduces the activity that had damaged the plants.

Watch for: Explain the effect, not just sequence.
