

Summary - Workbook 2

Section summaries and higher-transfer compression practice.

How to use this workbook

This workbook focuses on paragraph/section summaries and harder whole-passage compression. Several options will contain true information, so judge each choice by scope and completeness.

Before you start

- Match the target. If the question asks about paragraphs 2-3, ignore information outside those
- paragraphs.
- Preserve relationships. Cause/effect, contrast, sequence, and problem/response are often more
- important than individual facts.
- Prefer concise completeness. A good summary is short, but not so short that it loses the point.

Text 1 - Nighttime Pollinators

Many people associate pollination with bees active during the day. However, moths and other nighttime insects also move pollen among flowers. In one field study, researchers covered some flowers at night but left others open. The flowers available to nighttime insects produced fewer seeds when access was blocked. The researchers caution that the importance of nighttime pollinators varies by plant species and location, but the findings show that daytime observations alone can miss part of the pollination process.

1. Which statement best summarizes the whole text?

A. Nighttime insects can contribute to pollination, so studies that observe only daytime activity may miss part of the process. B. Moths are more important pollinators than bees in every ecosystem. C. Researchers covered some flowers at night during one study. D. Flowers always produce fewer seeds when insects cannot reach them at night.

2. Which statement best summarizes the final two sentences?

A. Nighttime pollination is identical in every location. B. The exact role of nighttime pollinators varies, but ignoring them can give an incomplete picture. C. Researchers should stop observing daytime pollinators. D. Plant species do not affect pollination patterns.

Text 2 - Repairing Before Replacing

A community workshop teaches residents to diagnose simple problems in small appliances before throwing them away. Instructors begin by showing participants how to check plugs, switches, and loose connections. Participants then practice on donated devices that are already broken. Not every item can be repaired safely, and instructors emphasize when replacement is the better choice. The workshop's goal is not to save every appliance but to help people make more informed decisions about repair and waste.

3. Which statement best summarizes the whole text?

A. A workshop teaches basic repair checks and safe decision-making so residents can avoid unnecessary waste without trying to repair every device. B. People should repair every broken appliance instead of buying a replacement. C. Participants practice only on

devices that already work. D. Loose electrical connections are the most common cause of appliance failure.

4. Which statement best summarizes the middle part of the text describing instruction?

- A. Instructors teach basic checks and then let participants practice on broken donated devices. B. The workshop is mainly a lecture about environmental policy. C. Participants are asked to bring expensive personal appliances for repair. D. Instructors replace every device that cannot be repaired.

Text 3 - The Unfinished Mural

Sora had volunteered to paint the final section of a neighborhood mural, but after seeing the detailed work completed by older artists, she considered asking someone else to finish it. She spent an hour mixing colors without touching the wall. Then one of the artists showed her a patch he had repainted three times and said, "The wall remembers the final layer, not the first two." Sora began with a small corner. By sunset, her section was not perfect, but it was finished, and she had marked three places she wanted to improve the next morning.

5. Which statement best summarizes the story?

- A. Sora nearly gives up because she fears her work will not match others, but encouragement helps her begin and accept revision as part of the process. B. Sora spends an hour mixing colors before painting a mural. C. Experienced artists never make mistakes when painting murals. D. Neighborhood murals should always be completed before sunset.

6. Which detail is least necessary in a concise summary?

- A. Sora is intimidated by the older artists' work. B. An artist explains that his own work required repainting. C. Sora spends an hour mixing colors. D. Sora begins painting and plans to revise parts later.

Text 4 - Two Ways to Measure a Park

City planners evaluating a new park first counted how many people entered each day. That number showed overall use but did not explain what visitors did once they arrived. The planners then added short observation periods and voluntary surveys. Those methods revealed that some areas were used mainly for exercise, others for quiet sitting, and others for family activities. No single measure gave a complete picture, so the final report combined attendance counts, observations, and survey responses.

7. Which statement best summarizes the whole text?

- A. City planners combined several kinds of evidence because attendance counts alone could not explain how people used the park. B. Most park visitors prefer family activities to exercise. C. Surveys are always more accurate than attendance counts. D. The planners stopped counting park visitors after adding surveys.

8. Which statement best summarizes the section describing the added methods?

- A. Observations and surveys helped show how different parts of the park were being used. B. The park was divided into three official zones. C. Visitors were required to complete a survey before leaving. D. Attendance counts became unnecessary once planners observed visitors.

Answer key and reasoning

- 1. A. A captures the finding and its implication while preserving the researchers' caution.**
- 2. B. B keeps both the limitation and the broader implication of the final two sentences.**
- 3. A. A includes the instruction, the safety limit, and the real goal. The others contradict or narrow the passage.**
- 4. A. A accurately compresses the sequence of instruction without adding unsupported details.**
- 5. A. A preserves the conflict, the turning point, and the change in Sora's approach.**
- 6. C. The exact hour of color mixing illustrates hesitation, but the summary can express that hesitation without the detail.**
- 7. A. A captures the limitation of one measure and the reason for combining methods.**
- 8. A. A captures what the added methods contributed without inventing requirements or eliminating the role of counts.**

Mistake check

- Scope error? Underline the exact paragraphs or section named in the question before evaluating
- options.
- Lost relationship? Ask whether the author is comparing, explaining a cause, describing a sequence, or
- balancing a benefit with a limitation.

- Too much detail? Keep the category or conclusion; drop examples unless they are essential.
