

Supporting Details - Workbook 01

Focused practice in choosing the strongest evidence for a stated idea. Every question tests supporting details only.

How to use this workbook

For each text, read the idea in the question first. Then choose the detail that most directly supports it. Be careful: several choices may be true, but only one gives the strongest evidence.

Text 1 - Evening Library Hours

The Westbridge Library tested later closing hours on Tuesdays and Thursdays for eight weeks. Staff expected university students to use the extra time most often, but sign-in data showed a wider mix of visitors. Parents stopped by after work, job seekers used the computers, and students stayed to finish group projects. Average attendance during the added hour was 42 people, compared with 17 people during the final hour on regular days. The library board will review staffing costs before deciding whether to keep the schedule.

1. Which detail best supports the idea that the later hours attracted more people than the library usually saw near closing time?

- A. The test lasted eight weeks.
- B. Average attendance during the added hour was 42 people, compared with 17 during the final hour on regular days.
- C. Parents and job seekers were among the visitors.
- D. The board will review staffing costs.

2. Which detail best supports the idea that the extra hour served more than one type of visitor?

- A. Staff expected university students to use the time most often.
- B. The test happened on Tuesdays and Thursdays.
- C. Parents, job seekers, and students all used the extra hour.
- D. The board has not made a final decision.

Text 2 - Rain Gardens on Oak Street

After repeated street flooding, the city added three rain gardens along Oak Street. The gardens sit slightly below sidewalk level and contain plants that tolerate both wet and dry conditions. During storms, runoff from nearby pavement flows into the planted areas instead of moving immediately toward the storm drain. In the first rainy season after installation, city sensors recorded lower peak water flow at the nearest drain during several heavy storms. The

city is collecting another year of data before deciding whether to add more rain gardens.

3. Which detail provides the strongest support for the idea that the rain gardens can reduce how quickly stormwater reaches the drain?

- A. The gardens contain plants that tolerate wet and dry conditions.
- B. The city installed three gardens along Oak Street.
- C. Sensors recorded lower peak water flow at the nearest drain during heavy storms.
- D. The city plans to collect another year of data.

4. Which detail best supports the idea that the city is treating the project as a trial rather than a final solution?

- A. The city is collecting another year of data before deciding whether to add more gardens.
- B. The gardens sit below sidewalk level.
- C. Runoff moves from pavement into the planted areas.
- D. Oak Street had repeated flooding.

Text 3 - Shared Tool Cabinet

A community center created a cabinet where residents can borrow basic tools for small home repairs. Members register with an ID, choose a return date, and record the item they borrow. During the first three months, the most frequently borrowed items were drills, measuring tapes, and step ladders. Staff initially worried that many tools would be returned late, but 91 percent of loans came back by the agreed date. The center has begun asking members which additional tools would be most useful.

5. Which detail best supports the idea that most borrowers followed the return rules?

- A. Members register with an ID.
- B. The center lends drills, measuring tapes, and ladders.
- C. Ninety-one percent of loans were returned by the agreed date.
- D. Staff are asking which tools members want next.

6. Which detail best supports the idea that the center may expand the selection of tools?

- A. Residents use tools for small home repairs.
- B. Staff are asking members which additional tools would be most useful.
- C. Measuring tapes were among the most borrowed items.
- D. Members choose a return date.

Text 4 - A First Solo Delivery

Mina had spent two weeks riding with an experienced courier before making her first delivery route alone. She checked the address list three times before leaving the warehouse and kept the map open beside her. At the first apartment building, she almost entered the wrong stairwell, then stopped to compare the unit number with the directory. By midday, she was moving through the route without reopening the map at every turn. When she returned, her supervisor asked whether she wanted another rider the next day. Mina looked at the route sheet and said she would try it alone again.

7. Which detail best supports the idea that Mina becomes more confident during the day?

- A. She had trained with an experienced courier for two weeks.
- B. She checked the address list three times before leaving.
- C. By midday she no longer needed to reopen the map at every turn, and she chose to work alone again the next day.
- D. She almost entered the wrong stairwell at the first building.

8. Which detail best supports the idea that Mina tries to avoid mistakes?

- A. She checks the address list repeatedly and compares the unit number with the directory before choosing the stairwell.
- B. Her supervisor offers another rider for the next day.

- C. She returns to the warehouse after the route.
- D. She had spent two weeks training.

Answer key

1. **B** - The attendance comparison directly shows that more people came during the added hour.
2. **C** - Naming several different groups directly supports the idea that the extra hour served a range of visitors.
3. **C** - The sensor result directly measures a lower peak flow at the drain after the gardens were installed.
4. **A** - Waiting for more data before expanding the project clearly shows that the city is still evaluating it.
5. **C** - The 91 percent on-time return rate directly shows that most borrowers followed the deadline.
6. **B** - Asking members about additional tools directly suggests that the center is considering adding more.
7. **C** - Her reduced dependence on the map and her decision to repeat the route alone both directly show growing confidence.
8. **A** - Checking the list and verifying the directory are specific actions she takes to prevent an error.
